

Semi-vertical Mouse Newtral 3

Wireless semi-vertical mouse with extra-large palm support, programmable buttons and choice of three sizes

Ergonomic benefits

The very successful previous model has been improved in many details to be even more comfortable in use.

- The mouse design sloping down from the forefinger to the little finger reduces the undesirable wrist and forearm pronation
- The deep hollow for the thumb lets the thumb rest comfortably in it.
- Users can choose between three different sizes to optimize the suitability. Besides, there is a model for left-handed users.
- The extra-large palm support removes rubbing of the little finger and the palm heel against desk. The hand support is magnetically attachable and easily detachable for those who prefer not to use it.
- The palm rest also supports the wrist in such a manner that the mouse can be moved by the forearm alone instead of the wrist. This means that the movements come from the shoulder area, thus increasing circulation in the whole of the upper arm. The consequent reduction in wrist movements relieves stress in the forearm. Moreover, since the palm is supported the wrist is not strained by carrying the weight of the forearm.

Other benefits

People allergic to rubber can use the Newtral mice with no harm. There is no latex or rubber in the Newtral mice.

Programmable buttons: 6 buttons are programmable according to the needs of the user.

Users can select from a wide range of actions or even program Hot Key combinations and assign these to any of the 6 buttons. The driver can store up to 5 complete pre-programmed profiles. Additional customization options include the option of customizing the pre-set DPI settings and changing the polling rate.
